CUBEO

home from the garden represents her carrying capacity. These are the technical problems. They are not inherently formidable, except in terms of the traditional sexual division of labor of the Cubeo. The men who make the original clearing can call upon group labor and they have the spare time. If increase in manioc cultivation were only a matter of preparing a clearing it would be relatively easy for any community to double its present zone of planting. The Cubeo, however, must calculate the size of a clearing in accordance with how much land the women of a household, working independently, can cultivate. On her part, the woman does not cultivate more than she can handle in the course of her accustomed routine. In manioc cultivation each household is autonomous; and while a woman can call upon the help of another woman when she is not well there is simply no collective or cooperative organization to help harvest, bring in, and process the crop. The headman who has the authority to direct the masculine work party that prepares the clearing has no jurisdiction over the work of the women. And neither does anyone else.

Nor does the nature of demand place much pressure upon manioc production. Under ideal conditions at least two-thirds of the manioc crop is for food. The rest is divided between chicha and farinha. Since the Cubeo are moderate eaters and do not have the custom of feasting outsiders, the demand for manioc as food is inelastic. There is only a little more elasticity in the demand for chicha. Although the drinking party is a principal means for binding the sibs it cannot be said that increasing the quantity of chicha consumed at a party or adding to the traditional number of parties would promote additional sib cohesiveness. In this instance a law of diminishing returns may be said to operate.[3] In any case, since each sib assumes some of the responsibility for entertaining the others, the burden of supplying the chicha is phratry-wide. The poorer sibs entertain less often than do the richer ones.

It is in the production of farinha that some elasticity in demand may be expected. Farinha, as the Cubeo equivalent of a "cash crop," pays largely for vanity articles, ornaments that have no traditional sanction, but also for cloth petticoats, that have now become customary apparel. However, this aspect of production for the market is also socialized. The goods a woman acquires from the sale of her farinha are largely committed to the intricate network of gift exchanges that apply between husband and wife, brother and sister, and between ceremonial friends of opposite sex. In a general way
